Flow in SearchScreen
Component

SearchScreen function called

Nothing visible on screen!

User enters a search term, submits it, request to Yelp made

Get search results, call setter

Updated state causes component to rerender

Now we have something to show to the user!

Flow in SearchScreen
Component

SearchScreen function called

searchApi called immediately

Make request to yelp API

Get search results, call setter

Updated state causes component to rerender

## **UseState's Second Argument**

useState(() => {})	Run the arrow function <b>every time</b> the component is rendered
useState(() => {}, [ ])	Run the arrow function <i>only</i> when the component is <i>first</i> rendered
useState(() => {}, [value])	Run the arrow function <i>only</i> when the component is
	first rendered, and when the 'value' changes
